## U.S. Department of Commerce Privacy Impact Assessment USPTO KUDO Platform (UKP)

**Unique Project Identifier: EIPL-EUS-07-00**

### **Introduction: System Description**

*Provide a description of the system that addresses the following elements:*

*The response must be written in plain language and be as comprehensive as necessary to describe the system.*

USPTO Kudo Platform (UKP) enables business units to share vital knowledge through collaboration capabilities that incorporate data, multilingual voice, and video communication technologies. The UKP is a FedRAMP ready cloud-based solution for over-the-web meetings and video conferencing in multiple languages. Attendees can participate in webinars, web meetings and training sessions, share content and collaborate globally. KUDO streams real-time language interpretation to participants' smartphones and computers, so everyone can join in their own language from anywhere. Attendees are able to cast votes and voice their ideas while the meeting unfolds.

The purpose of this system is to enable USPTO business units to collaborate with external customers who speak a language other than English through hosting online meetings on a secure cloud-based video conferencing platform with real-time multilingual interpretation. USPTO business units gain efficiency and effectiveness by communicating and sharing vital business knowledge with internal customers. The UKP system users are comprised of employees and contractors, including system administrators and regular users that access the system internally through PTO Net and external customers who access the system over the Internet. Users include USPTO Office of Policy and International Affairs (OPIA), Global IP Academy (GIPA), Office of Undersecretary, and GIPA staff.

***(a) Whether it is a general support system, major application, or other type of system***

UKP is a Software as a Service (SaaS).

***(b) System location***

UKP is hosted in the cloud by KUDO, Inc. - KUDO Platform, FedRAMP Ready system.

***(c) Whether it is a standalone system or interconnects with other systems (identifying and describing any other systems to which it interconnects)***

UKP receives PII from the USPTO ICAM-IDaaS system via Security Assertion Markup Language (SAML) 2.0.

**ICAM-IDaaS:** The mission of the ICAM-IDaaS is to provide an enterprise authentication and authorization service to all applications/AIS's. As part of the enterprise services it will also provide compliance for some of the NIST 800-53 controls (e.g. AC, AU AP). The system provides following services to the enterprise:

- User Provisioning and Life Cycle Management

- User Roles and Entitlement Management
- User Authentication and Authorization to protected resources
- Application Integration/Protection
- NIST controls compliance related to AU, AC, and IA family

***(d) The way the system operates to achieve the purpose(s) identified in Section 4***

UKP provides meeting links to meeting participants and interpreters. Meeting participants join the meeting via the meeting links from their device browser or KUDO Mobile App. Interpreters join meetings via the meeting links using their computer. Meeting content includes video, audio, and data from meeting participants and translated audio from interpreters.

***(e) How information in the system is retrieved by the user***

Users are authorized USPTO staff, contractors, and public users, including public interpreters. Users connect to the KUDO SaaS cloud via authorized USPTO devices and networks, web browser, or KUDO mobile app. USPTO staff and contractors host and participate in multilingual web conferences and interpreters participate and perform language translation. Public users participate in the web conference.

***(f) How information is transmitted to and from the system***

Users access KUDO through a browser using PTONet or VPN. Users are authenticated via SAML 2.0. Data is transmitted to and from the system via Hypertext transfer protocol secure (HTTPS) and Real-Time Messaging Protocol (RTMPS) connection to the FedRAMP Ready KUDO Platform SaaS Cloud.

***(g) Any information sharing conducted by the system***

Authorized USPTO staff and contractors have access to the data stored on the UKP System.

***(h) The specific programmatic authorities (statutes or Executive Orders) for collecting, maintaining, using, and disseminating the information***

The citation of the legal authority to collect PII and/or BII is 5 U.S.C 301, 35 U.S.C. 2, and E.O.12862.

***(i) The Federal Information Processing Standards (FIPS) 199 security impact category for the system***

The information provided by virtual meeting participants is collected, maintained, or disseminated to promote information sharing initiatives, to improve employee or customer satisfaction, and to improve Federal services online. Meeting recordings (i.e., video and audio), files, notes, chat logs and transcripts, and any other information uploaded while using the Services is collected and maintained to promote information sharing. The list of meeting participants allows meeting hosts to forward translations of the meeting into different languages as requested by the meeting participants which promotes employee or customer satisfaction. Name and email address are collected and maintained in audit logs to improve federal services online.

5.2 Describe any potential threats to privacy as a result of the bureau’s/operating unit’s use of the information, and controls that the bureau/operating unit has put into place to ensure that the information is handled, retained, and disposed appropriately. (For example: mandatory training for system users regarding appropriate handling of information, automatic purging of information in accordance with the retention schedule, etc.)

The risks to the system are insider threats and adversarial entities. Mandatory IT awareness and role-based training is required for staff who have access to the system and addresses how to handle, retain, and dispose of data. Training is also provided to handle insider threats. UKP implements NIST security and management controls to prevent the inappropriate disclosure of sensitive information. Automated mechanisms are in place to ensure the security of all data collected. Security controls are employed to ensure information is resistant to tampering (Physical and Access Controls), the confidentiality of data in transit (Encryption), and that data is available for authorized users only (Access Control). Management controls are utilized to prevent the inappropriate disclosure of sensitive information. In addition, the Network and Security Infrastructure System (NSI) and Security and Compliance Services (SCS) systems provide additional automated transmission and monitoring mechanisms to ensure that PII is protected and not breached by any outside entities or insider threats. In the event of disposal, UKP uses degaussing to permanently remove data according to government mandate and security policy.

<input type="checkbox"/>	Other (specify):

8.2 Provide a general description of the technologies used to protect PII/BII on the IT system. *(Include data encryption in transit and/or at rest, if applicable).*

UKP provides protection of PII in accordance with NIST 800-18 Rev. 1 and NIST 800-53 Rev. 4. The UKP System Security Plan (SSP) addresses the extent to which the security controls are implemented correctly, operating as intended, and producing the desired outcome with respect to meeting the security requirements for the information system in its operational environment. The SSP is reviewed on an annual basis. In addition, annual assessments and Continuous Monitoring reviews are conducted for UKP. The USPTO Cybersecurity Division (CD) conducts these assessments and reviews based on NIST SP 800-53 Revision 4, Security and Privacy Controls for Federal Information Systems and Organizations and NIST SP 800-53A Revision 4, Assessing Security and Privacy Controls in Federal Information Systems and Organizations. The results of these assessments and reviews are documented in the UKP Security Assessment Package (SAP) as part of the system's Security Authorization process.

UKP implements security and management controls to prevent the inappropriate disclosure of PII. Automated mechanisms are in place to ensure the security of all data collected. Security controls are employed to ensure information is resistant to tampering (Physical and Access Controls), the confidentiality of data in transit (Encryption), and that data is available for authorized users only (Access Control).

UKP is secured using appropriate administrative, physical and technical safeguards in accordance with the FedRAMP Moderate Impact-SaaS Authorization. All access has role-based restrictions, and individuals with access privileges have undergone vetting and suitability screening. The USPTO maintains an audit trail and performs random periodic reviews to identify unauthorized access and changes as part of verifying the integrity of data.

USPTO uses the Life Cycle review process to ensure that management controls are in place for UKP. During the enhancement of any component, the security controls are reviewed, re-evaluated, and updated in the SSP. The SSP specifically addresses the management, operational, and technical controls that are in place, and planned, during the operation of the enhanced system. Additional management controls include performing national agency checks on all personnel, including contractor staff. Additionally, USPTO develops privacy and PII-related policies and procedures to ensure safe handling, storing, and processing of PII.

UKP is secured by various USPTO infrastructure components, including the NSI and SCS systems and other OCIO-established technical controls to include SAML 2.0 authentication to UKP. Web communications leverages modern encryption technology such as HTTPS and RTMPS connections.

**Section 12: Analysis**

12.1 Identify and evaluate any potential threats to privacy that exist in light of the information collected or the sources from which the information is collected. Also, describe the choices that the bureau/operating unit made with regard to the type or quantity of information collected and the sources providing the information in order to prevent or mitigate threats to privacy. (For example: If a decision was made to collect less data, include a discussion of this decision; if it is necessary to obtain information from sources other than the individual, explain why.)

Foreign and adversarial entities, insider threats, and computer failure are activities which may raise privacy concerns related to the collection, maintenance, and dissemination of PII. USPTO has identified and evaluated potential threats to PII such as loss of confidentiality and integrity of information. Based upon USPTO's threat assessment, the Agency has implemented a baseline of security controls to mitigate the risk to information to an acceptable level. Controls that the bureau/operating unit have put into place to ensure that the information is handled, retained, and disposed appropriately include training, access restriction, password protection, and data retention policies.
